

TEMPO

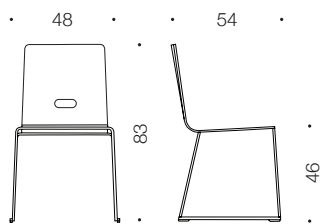

t32 chair

design Timo Saarnio

The light and clearly shaped Tempo t32 chair perfectly suits a range of different spaces and needs. Thanks to its strong frame structure, it can be used in spaces where the interior has to be easily transformed to suit various functions, such as restaurants, cafés, and congress centres. The frame is formed from 10x10 mm steel wire. The slim frame enables the efficient stacking of the chairs, thus saving space, and a chair trolley makes it even easier.

The Tempo t32 chair has a tiny and barely noticeable row connector, which makes it possible to link them together in multipurpose halls. Thanks to its small size, the chair can be stored easily, e.g., under a stage.

A grabbing hole is available in the backrest of the Tempo t32 chair for easy handling.
