

TEMPO benches

design Timo Saarnio

ARKTIS

Tempo benches can be used in public spaces such as libraries, museums, and modern learning environments. They have a strong steel frame powder-painted in standard colours or according to the interior plan. The seat is made of solid wood or with upholstery. There is also a bench with a backrest (t47) available.

For outdoor use, the Tempo benches are produced with weatherproof materials, the seat being, for example, oak, and the frame being zinc-plated and powder-coated steel.

Thanks to its clear forms and structure, the Tempo bench can be used in various interiors and functions.
