

TEMPO t31 chair

design Timo Saarnio

The Tempo t31 chair has a clear construction. It can be used in many spaces, such as a guest chair in an office, conference room, canteen, or auditorium. The frame is a powder-coated steel tube, with or without armrests. The seat is made of form-pressed plywood in ash, birch, oak or laminate.

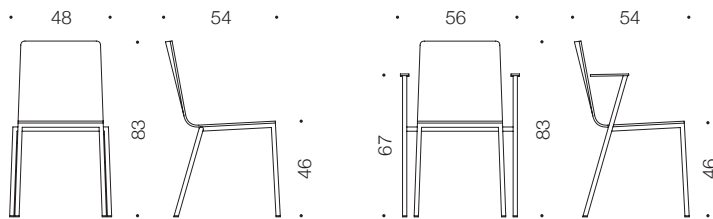

Seat upholstery, front side upholstery and full upholstery are available. By varying the color of the frame, plywood seat or the fabric the chair can be designed to match the complete interior plan. Tempo t31 chair stacks and it can be equipped with row connection and felt glides. A transport trolley is also available.
