

KARI-SALUS10

Wooden chair for care environments
Elevated seating height

Design Kari Asikainen

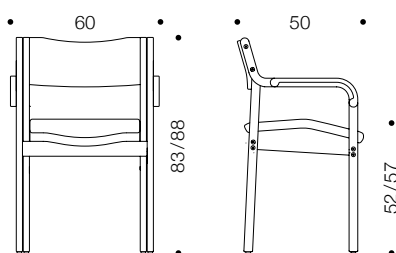

The Kari-Salus10 is a form-pressed birch veneer chair with an increased seat height, designed for care environments and users with reduced mobility. The forward-sloping seat supports ergonomic sitting posture and facilitates sit-to-stand transitions.

The seat incorporates integrated moisture protection, and the upholstery system is designed for efficient maintenance, utilising fasteners for easy removal and reattachment.

Kari-Salus10 is compatible with Kari tables and seating systems.

KARI-SALUS10
