

TEMPO t35k/HW Wide wooden chair

design Timo Saarnio

Tempo t35k/HW is an extra wide wooden chair designed for public interiors, combining clear structural logic with a light-weight and precise expression. The angular, linear design is supported by a robust solid wood frame and a separate seat and backrest construction.

A shaped, circular recess in the seat adds visual character to the chair while enhancing ergonomics. The gently curved backrest supports an upright sitting posture, connecting to tapered rear legs to create a refined, light appearance. A support rail integrated beneath the seat reinforces stability while maintaining a clean and consistent structure.

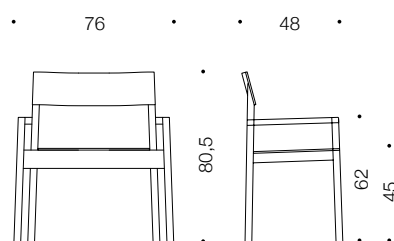

Part of the Tempo collection, the wide model extends seating width without compromising visual consistency. Its proportions make it particularly suitable for inclusive seating applications, supporting comfort and accessibility within unified interior schemes.

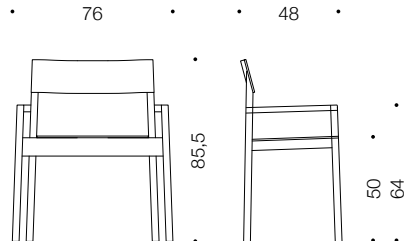

t35k/HW/50, seat height 50cm,
shaped recess, crown cut ash
