

KARI-SALUS KXY and KXYN

Lounge chair for care environments

Design Kari Asikainen

Kari-Salus KXY is a form-pressed wooden lounge chair designed for care environments as an alternative to the Kari KX armchair. The design combines supportive armrests with an ergonomic seating posture, providing comfort in extended sitting situations typical of healthcare and waiting areas.

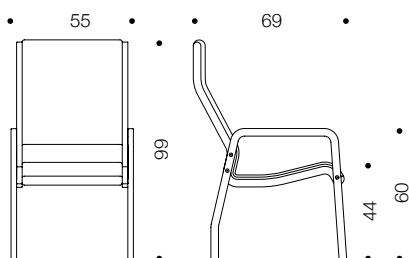

The chair is developed to meet the functional requirements of care settings, with integrated moisture protection and durable upholstery solutions that support hygiene and maintenance needs. The overall form supports ease of use for both independent and assisted seating.

KXY/KXYN is suitable for use in lounges, waiting areas and care environments, and is compatible with Kari tables and seating systems.
